

C A Anusha

Experienced DevOps Engineer with 8 years of overall experience, including 3 years specializing in DevOps and 5 years in embedded systems development. Skilled in automating infrastructure, managing cloud-native deployments, and building secure, scalable CI/CD pipelines. Proven ability to improve system reliability, streamline delivery workflows, and enhance performance through infrastructure as code, continuous integration, and proactive monitoring. Strong foundation in Linux systems, scripting, and system-level debugging, with hands-on experience across both product and platform engineering teams.

Spouse Visa valid till June 2027

EXPERIENCE

DevOps Engineer / Stellantis, Bengaluru

Dec 2023 – May 2025

- Designed and maintained CI/CD pipelines for AUTOSAR-based ECU firmware using **Jenkins** and **GitLab CI**, improving build efficiency and reducing integration issues by 40%.
- Automated firmware flashing and regression testing using **Python** and **Bash**, enabling unattended validation on lab ECUs.
- Collaborated with QA to integrate test reports and automate log analysis using custom scripts and system tools.
- Monitored firmware behaviour on test benches using Linux system tools and cron-based scripts for early fault detection.
- Containerized embedded toolchains using **Docker** to ensure build environment consistency across teams.

DevOps Engineer / Lam Research, Bengaluru

June 2021 – Dec 2023

- Created **automated build pipelines** using **Jenkins**, **Git**, and **CMake**, improving software release consistency and reducing manual intervention.
- Wrote **Bash scripts** for build automation, log parsing, and deployment packaging to streamline internal workflows.
- Participated in debugging cross-platform hardware-software issues, leveraging system logs, Java debuggers, and Linux tools for root cause analysis.
- Collaborated with test and integration teams to ensure high availability and responsiveness of control applications deployed on custom Linux-based systems.

Embedded Engineer II / Honeywell, Bengaluru

Jul 2017 – June 2021

- Developed CDAIO, a proprietary high-priority transfer protocol over TCP/IP, optimizing real-time communication between process controllers and remote IO modules.
- Enhanced protocol performance, achieving a 50ms response time with seamless integration of Modbus **TCP**, **EtherNet/IP**, and **Foundation Fieldbus (FF)** for industrial automation.
- Engineered an advanced event-handling mechanism, ensuring low-latency, deterministic communication for safety-critical applications.

AWARDS & RECOGNITION

Rookie of the Quarter (2017, 2024): Awarded for outstanding performance at Honeywell and Stellantis

Go Beyond Award (2018, 2019): Awarded for exceptional contributions

Hackathon Challenge (2018): Led a team to victory at Honeywell hackathon

Be Committed (2020): Awarded for dedication and consistent high performance

Best Hackathon Project (2021): Recognized for the innovative and impactful project developed at Lam Research hackathon.

Intel® oneAPI Hackathon (2023): Secured third place in a global hackathon showcasing innovative solutions using Intel oneAPI

Namma Yatri Hackathon (2023): Honorary mentions Namma Yatri Hackathon

Intel oneAPI Innovator (2023): Recognized by Intel for outstanding contributions and advocacy in oneAPI development

EDUCATION

BACHELOR OF ENGINEERING

Major: Computer Science

Aug 2013 – Jun 2017

Aggregate: 75.4%

GSSSIETW, Mysuru

SKILLS

DevOps Tools

Docker, Docker Compose, Kubernetes, Jenkins, Git, Terraform, Ansible

Cloud

AWS, Azure, GCP

Programming/Scripting

Python, Bash, Shell scripting, YAML, JSON

OS/Systems

Linux, Ubuntu, Yocto, Embedded Linux

Build & Automation

CMake, Make, GitLab CI

Monitoring/Logs

Grafana, Prometheus

OTHERS

SonarQube, Coverity, Wireshark, JIRA, Confluence, Wiki, Phabricator

KEY STRENGTHS

Deliberative
Strategic
Analytical
Command
Maximizer
Linux Specialist
